

Validation Run

01 · THE IDEA

Before writing a line of pipeline code, CryptoPrism validated the entire system for about \$12.

Validation Run

02 · HOW IT WORKS

Not \$12K. Real BigQuery queries across the six chains planned for launch. The goal was one number per chain: cost per qu

36 · Validation Run

Validation Run

03 · WHY IT MATTERS

Only after those unit economics worked did the pipeline get built. The order is the lesson. Most teams pick the database
